pp. 8, 24, 52; Ribeiro, 1957, p. 99) have already become current. Nevertheless, I incline to the view that in the case of the Xiriána it is a matter of one and the same large, widely scattered Yanonámi tribe. The material and spiritual culture of the Xiriána with whom the Surára and Pakidái are allied (the latter and the Xiriána whom I met among them themselves regularly accent the first a) corresponds perfectly with the one that Koch-Grünberg calls "Schirianá." The latter points out in one work that "Schirianá" is their self-designation, while "Schirischána" is a name which their neighbors and mortal enemies, the "Maquiritáres," gave them (Koch-Grünberg, 1913, p. 454). It should also be mentioned that the designation "Shrirana," according to Vinci, is a Makuxí /Macusi/ word (Vinci, 1956, p. 107).

160 In 1939, the
648 Waiká, too, gave up this maloka and moved to the Rio Mapulau, a left tributary of the upper Demini. Here, at the beginning of the year 1956, at the time of my stay among the Surára, they were attacked by a Xiriána tribe and destroyed. Surára warriors told me that all the Waiká men were killed and the women and girls were taken captives.

101
114 As inhabitants of the Rio Aracá, Nimuendajú entered on the above-mentioned map of this region (see p. 16), with the date of 1874, the Bahuana, an Aruak tribe. With reference to this, the Surára chief remarked that this tribe also goes by the proper name of Pootarí and was an enemy of the Surára, Pakidái, Xiriána, etc.; at the present time it lives in the source region of the Aracá.

The Barf suffered greatly from the Yupa, the Piaroa and Warao from the Caribe, but these sufferings were minimal compared to the oppression to which other tribes were subjected by the Whites. The Yanoama have been attacked for hundreds of years by the Caribe, who surrounded their territory with a semicircle along the north; the Yanoama endured something similar from the Arawak, who surrounded them in a semicircle along the south. But all in all, the White has not been very successful so far in approaching this primitive population and his destructive influence has not affected their ancestral customs. The Caribe and Arawak have declined gradually in vigor and numbers; now we are witnesses of the triumph of the Yanoama over their neighbors of a more refined culture, for not only did they defend their territory, but were successful in spreading to the north and west.

The strongest and most efficacious ally of the Yanoama has been the Cordillera de Parima, together with the dense tropical selva of the Territorio Amazonas. In the /181/ fateful period of persecution they have always found a safe refuge in the protecting selva. Nevertheless, as of relatively recent times, the different Yanoama subtribes are beginning to realize that the space beyond the conventional boundaries of their tribal territory is sparsely populated, almost deserted. The number of their traditional enemies has diminished considerably, and the invasions of their territory have had practically no consequences. In this manner they have gained almost 100 kilometers to the north of the Sierra de Pacarima, where the Casapare now live on the Upper Paragua, and the northern group of the Sanemá on the headwaters of the Ventuari, Erebato, and Caura rivers.

The center of distribution of the Casapare is located to the south of the Sierra Pacarima in the basin of the Río Branco. We know this Yanoama subtribe only through a few sporadic superficial contacts, and the people, as well as their territory, remain practically unknown. For this reason we consider the name Casapare with which we designated all the Yanoama in the zone of study as strictly preliminary, and we would not be surprised if we had to change it in the future for a more exact and adequate

name.

000

648 The massacre of the Indians to which we have made reference above was pointed out by Schomburgk (1841), who visited this land around 1839, /183/ and his data constitute the first report regarding the Yanoama of the north. Schomburgk had crossed the Sierra Pacarima when, on the way to the sources of the Orinoco, he found the Makiritare in the grip of great panic. The Yanoama, possibly a group of Waica, had killed a number of Makiritare who had been on their way to the Yanoama rancherías in order to establish commercial relations with them. A short time after that horrible massacre, the same Yanoama attacked a Makiritare rancheria with the intent of exterminating all its inhabitants. This event marked the date of the withdrawal of all the Makiritare south of this zone. Even the Caribe companions who were with Schomburgk accompanied them on their flight, abandoning him with his baggage a short distance from the sources of the Orinoco. It is easy to understand Schomburgk's emotional state, bordering on desperation, on finding himself so close to his goal without being able to reach it.

M
[361]
[167]

Y
114 On the upper Uraricuera, in the region of the Sierra Marutani, Schomburgk came upon a conuco /cultivated area/ of the "Kirishanas," whom he described as nomad Indians who depended primarily on hunting, fishing, and the gathering of wild fruits for their basic sustenance; some, however, cultivated small plantings of bitter yuca and peppers (Schomburgk, 1841, p. 417). Seventy-two years after this first report, Koch-Grünberg, in December of 1911, once again established brief communication with the Yanoama of this zone, and his information constituted, until a few years ago, the most important material on the Yanoama in general. Koch-Grünberg met representatives of two distinct groups. The first group (Casapare), which he found at the Purumamé Falls, lived at that time on the upper Uraricaparú, although it had only recently arrived in that region from the Uraricuera, above the island of Maraca. That was the place where they took by surprise all the Indians whom they robbed and killed.

Casapare
Pemon 5516

/[illegible] cont./

At the other end of the island of Maraca the territory of the Taurepan (Pemón) begins, and it is interesting to note that about the year 1911 the Casapare, under the command of one captain Kuranaí, had established peaceful contacts with the neighboring Caribe for the purpose of acquiring by barter European utensils, which they valued very highly. The custom of cultivating small plantings, which were noted by Schomburgk, Koch-Grünberg, and Gheerbrandt (1955, p. 345), must also be of Caribe origin.

Koch-Grünberg (1928, pp. 302-308) was able to publish the first vocabulary of a Yanoama language, and, as the same author points out, some words of Caribe origin can be distinguished in this idiom of the Uraricaparú River, /184/ but almost all of them refer to utensils and cultivated plants of Caribe or European origin.

The other group (Waica?) was visited by Koch-Grünberg four weeks after his first encounter with Yanoama people, with whom he lived in a rancheria on the Motomotó across from the Sierra Marutani. This group had relations with the Makú of the Marí River, from whom they adopted certain cultural elements, such as agriculture. We do not have a vocabulary from this group, but, according to information given to Koch-Grünberg by his native companions, they speak the same Yanoama idiom with slight dialectal differences.

The expansion of the Casapare toward the north is of recent date, since their sworn enemies, the inhabitants of the Paragua, as well as the Pemón to the northeast, ceased their reprisals and allowed the unhindered advance of the Yanoama nomads. It seems that at the same time the Sanemá of the southwest and the Casapare began to invade the zone. At the present time, the Yanoama dominate as far as the Marí River, a left tributary of the Paragua (5° 10'). The Pemón to the east of the Paragua have vacated the space between this river and the Caroní. Their nuclei are to be found on the Gran Sabana, in the southeastern part of Venezuela. Under the joint influence of civilization and the mission they have lost their characteristics as Caribe

Avake 555

/186 cont./
Y 114 797 162 indigenous groupings is interesting. In their report (1944, p. 87) they mention a total number of 296 Indians counted.

/187/ This result contrasts with the one obtained by the expedition of Montoya, and, in spite of his having traveled Y 162 •167 114 over much more territory than the Capuchin fathers, we must admit that Montoya found native populations in 1956 where the fathers saw none in 1940. This has its value in the first place inasmuch as it refers to Yanoama populations (Casapare, Sanemá), and it is significant for the reconstruction of the migratory history Y [361] of the Yanoama. Armellada and Matallana (1942, p. 76) say that a rancheria near the mouth of the Pumpiví, a river which flows into the Paragua on the right bank, was "the only one which the Shiriana Indians have on the Venezuelan side in the Paragua basin." Twenty-six years later Montoya (1956) and his companions discovered Yanoama rancherias established from the Marí River to the headwaters of the Paragua. This indicates that the expansion of the Casapare and Sanemá is of very recent A date in this zone of the Paragua and that it achieved its present [167] volume only in the last decades. The marginal tribes, such as [648] the Sapé and Arutani, have been pushed toward the north and are in the process of being absorbed by the Yanoama in the south and by the Caribe and the Whites in the north.

Y 101 Referring to the Yanoama of the Paragua, Montoya distinguishes the Guaharibo, Guaika, and Shirianna. According to his excellent map, the Guaharibo and the Guaica live between the upper Caura and the headwaters of the Paragua itself and the river Okasiarí. It is possible that these are the Sanemá and Waica. The Shirianna occupy the Paragua River from the Marí River to the source of the Paramichí River, and these seem to represent the Casapare of our nomenclature. The region of the greatest penetration by the latter into Venezuelan territory seems to be via the Sharopae River (3° 50') from where the route to the Uraricuera River starts.

Y 491 241 According to Montoya (1958, pp. 173-174), the Guaharibo (Sanemá) are almost totally ignorant of agriculture and cross rivers by means of their characteristic bridges, which consist simply of two thick lianas, parallel and one above the other, the upper one serving as a handrail.

Y /189 cont./
174
101 The expansion of the Sanemá to the north, that is, from the Padamo to the upper Ventuari, Erebato, and Caura, is relatively recent, but, to judge from the data given us by glottochronology, the separation of the various groups of the subcribe corresponds to 600-1,700 years. We established contact with three northern groups of the Sanemá: the Nabudub of the upper Ventuari, the Taclaudub of the upper Caura, and the Pubmatari of the Canaracuni. They apparently represent Sanemá groups which are quite well established, and the internal distance of this linguistic family is, in a way, surprising.

Y
101 The Sanemá of the Padamo and of the upper Orinoco are
184 practically unknown to science, and it is expected that the cultural difference between them and their brothers who live north of 4° and in close contact with the Makiritare is relatively pronounced.

Y
101 The geographic separation of the Sanemá into a southern
648 group and another northern one is recent and is due to the fact
167 that in 1947 Captain Cardona had to make a landing field on the Canaracuni (personal communication), and, since there were no Indians in the zone to help him in his venture, he went to Brazil and brought the first Sanemá to this region of Venezuela.

Y
167 This date marks the beginning of the infiltration of the Yanoama element on a larger scale into the land of the Makiritare, their
Y M
643 neighbors on the northwest, with whom they have lived in deep enmity from remote times. While the Makiritare of the Cunucunuma still do not tolerate large groups of Yanoama in their territory, those of the Ventuari, Erebato, and Caura live in close contact
Y M
[179] with large groups of the Sanemá subtribe. This was the way in which Makiritare culture of the tropical selva type penetrated to that essentially /190/ preagricultural tribe composed of hunters
Y M
648 and gatherers with a very rudimentary culture. The Sanemá received extremely bad treatment at the hands of the Makiritare, comparable to that received by a slave at the hands of his master, for which reason toward the year 1950 the Sanemá revolted against
4 the Makiritare and declared a war without quarter against them.
[411] It was then that the different Makiritare subtribes united to repulse the Sanemá, whom they conquered in various encounters, thanks to their fire-arms.

Makiritare SS 20

M Y 648 /190 cont./ scorn them, and, at first sight, they seemed to be unworried, but the knowledge that they no longer live alone in the land of their fathers, and the fact of having heard that four days prior to our arrival /191/ at the conuco an Indian who had sought refuge by climbing a tree was shot by a Sanemá arrow and fell lifeless into the river, constantly tortured them.

M 7 582 563 177 648 M [186] A powerful stimulus which always encouraged the Makiritare on their numerous trips was to get a wife among their neighbors of the same tribe. Nowadays, despite the intense scorn which the Makiritare profess toward the Yanoama, taking a wife from that tribe is not considered an impossible or degrading thing: there are many Yanoama women who have married Makiritare men (cf. Grelier, 1955b, p. 10). This matrimonial interchange inevitably carries with it an assimilation of cultures between the two tribes, a process in which the Makiritare cultural pattern will dominate that of the Yanoama and the Yanoama genes will infiltrate the Makiritare gene pool. There is not the least doubt but that the Sanemá, who were brought in for a short time, arrived at the upper Ventuari and Caura where they took up residence to stay, and that the present fusion between the Caribe and the Yanoama ought not to be explained so much by the good will of the former as by the vitality of the latter.

Y ● 167 563 177 648 Y 101 The Waica subtribe occupies the central part of the present Yanoama territory, that of the upper Orinoco and its tributaries above the mouth of the Ocamo, including also the southern bank of the river (Barker, 1953, p. 434). As we have already mentioned, they appear to live also in the general arc of the upper Rio Branco and its western tributaries, and Schuster (1958, p. 114) is very probably right when he says that the Sierra Parima does not bound the Waica zone, but that it extends to Brazilian territory.

Y [77] 797 We have already mentioned the first contacts which the Whites had with the Waica, and, after a somewhat unfruitful effort by Hamilton Rice at the beginning of the present century, the Waica world went without contact with science until the New Tribes Mission was able to start peaceful relations with the Waica through the missionary James Paul Barker. Y 114 Some ethnographic data were also published on this Yanoama subtribe by several

Sanema

one gave a thought to these peaks that towered higher with every bend of the river. Then one afternoon, after a storm, they dropped out of sight, and we realized that we had entered a different region. Manuera pointed leftwards, to the mouth of a small river whose water was yellow.

'Pulipuli. Nuna,' he told us—Nuna being the Shirian and Makiritari pronunciation of 'Luna'. 'There is my home, the home of the Shiriana.'

We swung into the mouth of the Luna and tied up under a tall clay bank among a few ill-made canoes—if you could call them canoes, for they looked more like rotten tree-trunks swept on to the little landing-beach in the course of some sudden flood.

Our arrival in the dirty waters of the Luna was a signal for swift and secret flight on the part of the population. Some Shirian youngsters had been hunting a capybara which the throb of our motor scared off. The boys, no less scared than the animal, ran to hide in the nearby huts, spreading the wondrous news that men had come with beards and an engine.

The Moon Valley people occupy a fair-sized wedge of territory in the forests between the Lower Canaracuni and the Caura. Their little huts are sorry imitations of the big Makiritari erections, and they have burned out big patches of forest for the sowing of manioc and bananas. All this is the work of the last twenty years. Not till then did the tribes of the Shirian borderland grow weary of their nomad life, their wars and their plundering expeditions, and decide to set up house and home. Pulipuli became a sort of agricultural centre for the groups living on the Upper Caura, or on the Merehuari and its tributary streams as far as the great mountain saddle between Uasa-Coco, Canaua, and Uagua. These people here were therefore the most advanced of the Shirians, not only in a geographical sense but also in their culture. Their numbers were continually increasing because they had a magnetic attraction for neighbouring tribes who were still mere primitive forest hunters.

Manuera had married a Pulipuli girl and then joined her tribe. 'Let us build a fine house,' he had told her, 'and I'll come and live with you. I'll bring good manioc and banana roots. We'll plant a big patch, in the proper way we Makiritaris know, and there'll be no lack of food. You Shirians are for ever as hungry as beasts and I can't stomach the worms you eat.'

There was great puzzlement among the old Shirians—those whose hairless heads showed the marks of so many battles and so many robbing and plundering expeditions all through the valley and the Merehuari cordillera as far as the

9:Grolier K-5 (1951) 1957 SQ18 Yanoama SQ 18
Guaharibo

Guiano-Amazonas district of Venezuela, is neither so simple nor clear-cut as it at first appears. None of the Indians of the Guianian highlands are natural settlers. The more primitive groups, who live entirely from cropping the forest, fishing and hunting, are compelled to lead wandering lives; and those who practise agriculture and live in villages are ever ready for a change of scene. These things, allied to an ingrained migratory instinct, lead them to keep moving about the country throughout their lives.

More Guaharibos from the Padamo

On the afternoon of May 25th another party of Guaharibos arrived at Esmeralda. I was approaching the jetty in one of the boats when I heard Francisco shouting from the other bank. It was nothing new to hear Francisco's bellowing; whenever he had killed a tapir that was too heavy for him to carry alone, or when the day's bag was too big to be loaded on his minute *curiara*, he would give tongue in this manner. I turned back to join him and as I did so he pointed with a paddle to an Indian craft which till then had been hidden from me by the bank-side vegetation. I steered towards it, standing up in the boat and making gestures of welcome and friendship. For an answer two men stood up timidly in their boat as I went over to them and circled round them. Their craft, which rocked buoyantly in my wash, was built of a single strip of bark. It was similar to the one the children had left behind them, but bigger and contained thirteen people. Then I led them back to the landing-stage.

The official reception of these people we left to Butrón, who had a wonderful gift for this sort of thing. He quickly had some machetes brought out as gift-offerings. Of the boat's crew nine were young men in their teens, two of whom had their faces blackened with charcoal. Among them was Mopare, the eldest of our first visitors. Two children of about six and two young women tried to efface themselves against the bottom of the boat. The youths wore some cotton material round their middles which was secured back and front by a belt of string. The women wore a sort of fringed apron no more than a few inches across.
